

LIGHTING

GLARESHIELD AND SUB-PANEL LIGHTING KITS

Affordable Panels stocks Electroluminescent Lighting kits for use in the aircraft cabin. Use it under the glareshield to illuminate the installed panel equipment. Under the panel to illuminate a switch sub-panel, as builder Tom Jones shows in the photo below. EL lighting can be extremely useful in the baggage compartment for those hard to find items on a moonless night.

Our lighting strip kits have an extremely low power consumption and long life, which makes them ideal for the aircraft environment. These strips are available in Blue, Red and Green colors and come with a self adhesive backing. The lighting strip can be easily cut to any required length with the use of a pair of scissors.

Red and Blue are our most popular colors.

EL LIGHTING KIT

Our lighting kit includes a 1/2 inch by 5 feet long EL strip with leads attached, as well as a 12V inverter to power the strip. Our inverters come ready to mount with a self adhesive backing as well as provisions to add a second EL lighting strip.
